EDB Postgres AI is your AI factory to securely build, test, and launch sovereign AI applications

EDB's AI Knowledge Base Stack in Postgres

AI Knowledge Base – Meet Postgres

Storing Data (DATA, not vector embeddings)

- PG tables – but also: external storage (= natural habitat of unstructured)

Preparing Data – For consumption by RAG & agents

- Bite-sizing for AI (summarization, chunking)
- Normalizing data modality (PDF extraction, OCR)
- Generate vector embeddings

Indexing & Searching Data – (vector index)

- PGVECTOR is ONE answer
- Not the only one, not necessarily the best one...

Data to **Retrievable Knowledge**

- AI Knowledge Base for semantic retrieval
- Best practice: + reranking of the retrieved results

Keeping Knowledge **Up-to-Date**

- Automated Pipelines in Postgres
 - Including real-time execution

Making **Knowledge HA**

- The whole nine yards of Postgres

EDB's AI Knowledge Base Stack in Postgres

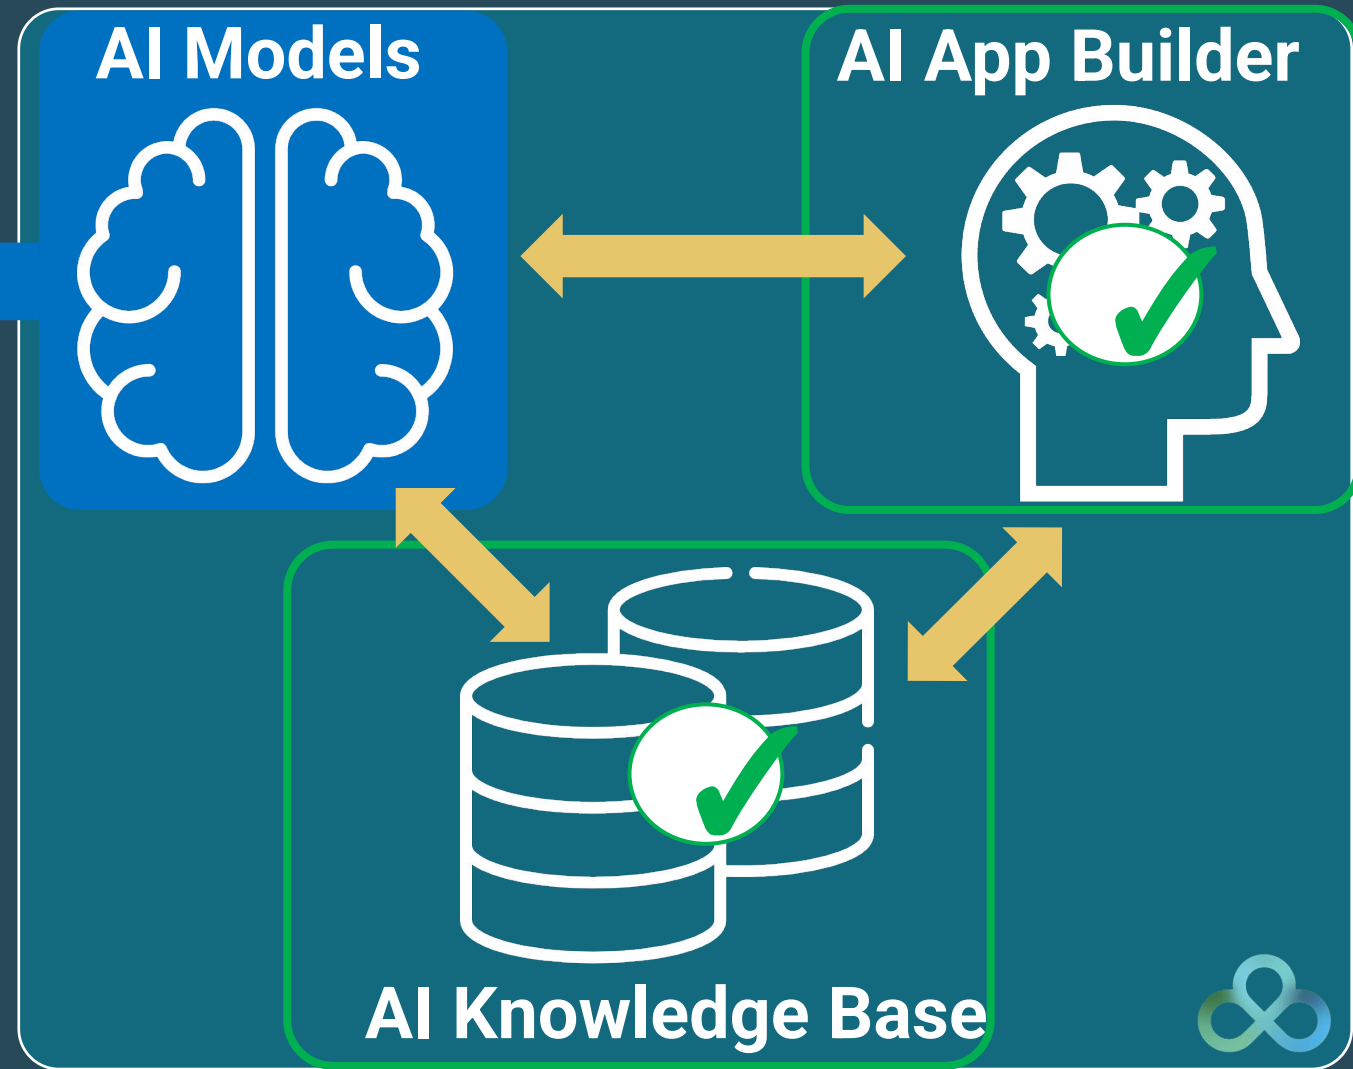

Sovereign AI – EDB's AI Model Serving

- **Deploying & Scaling LLMs**
- **OpenAI-compatible Inferencing**
(using kserve)
- **Exploiting GPUs**
- **Driving AI Knowledge Bases**
- **Driving AI Applications**
